Loading Arm Service Capabilities

In addition to providing loading arm products, LGG Industrial can support you in your installation projects and with preventative maintenance.

Project Capabilities

- LGG Industrial will work with your EPC firms and with your project managers to help them design your system using our extensive knowledge and experience with loading arm systems.
- We will make site visits and evaluate your system, making recommendations along the way.
- LGG Industrial can bring in leading manufacturers based on our site visit and help choose the best source for your needs. We will work with our manufacturers and their engineers to assure we are meeting all the required design aspects.
- We can provide drawings for your project engineered systems to assure the product meets your specifications.
- LGG Industrial will work with your installation team to assure installation goes smoothly. We can be onsite to work with your team to kick-start the installation.
- LGG Industrial will work with your on-site staff or general contractor to guide with the installation of your equipment.
- LGG Industrial has technicians that work onsite with your maintenance staff who are conducting preventive maintenance to help them avoid costly repairs and make your equipment last longer.

Loading Arm Repairs

LGG Industrial is committed to lowering your total cost of ownership by providing access to repair services aimed to help you extend the life of your loading arms by repairing them rather than replacing them.

- LGG Industrial partners with a repair facility in the Houston, TX area that can repair loading arms and accessories such as:
 - Dry Break Fittings
 - Loose Swivel Joints
 - Safety Breakaways
- Repair Capabilities include:
 - Complete tear down and inspection to determine if the arm can be fixed
 - Providing a full inspection report following the disassembly and inspection of your equipment
 - Hydro testing before equipment is put back into service
- We require an RGA (return goods authorization) for any repair containing hydrocarbons. This assures we are compliant with EPA standards. We also require SDS to accompany each repair.
